@colorndrive

To have better results, it is preferred to paste or clay wash your car before application. Please try handle one panel at a time.

You can also check our videos from our web site [www.colorndrive.com](http://www.colorndrive.com)

- 1 Wash and clean your car. Be sure there are no residual wax or dirt in the surface.
- 2 Use pre-application spray on the panel that you are working.
- 3 Drop 5-10 Ceramic to coated sponge and apply to area. Wait couple of minutes.
- 4 Moisture the spreading Microfiber and apply to area.
- 5 Use Polishing Microfiber to finish the process.

Do not wash your car at least 48 hours after the treatment. Make sure the surface is out of direct sunlight. Best application Temperature is between 5-30 degrees. Multiple layers can give better results. Try to choose dust free environment.
